Scott,
We have a fire near Los Alamos National Lab (see below).
We are building a FlexViewer for the R6 EOC.
Doesn't GeoMac have a restricted site that provides operational data for the fire fighters?
Can we get access to that information?
Thanks,
-dp-
P.S. we could also talk about our Miss.. River response FlexViewer on Wed., if you want.

It's an arcims service available from <http://www.geomac.gov>. Still trying to determine who created it.

Subject: Fire Data

Eric,

We've found 3 different online sites (Forest Service, GEOMAC, and NOAA) all showing basically the same thing. There are points showing fire detects from MODIS, GOES, and AVHRR. We haven't found a perimeter layer as of yet. GEOMAC has a polygon layer but it's just a small buffer around the points and not a true perimeter.

We've downloaded the current shapefile and KMZ (Attached) and also found the web mapping services & web feature services. We'll start creating a flex app displaying the web services.

Forest Service: <http://activefiremaps.fs.fed.us/conus/viewer.htm>

GEOMAC: <http://www.geomac.gov/viewer/viewer.shtml>

NOAA: <http://www.firedetect.noaa.gov/viewer.htm>

KMZ: [attachment "Active Fire Mapping Program.kmz" deleted by Eric Delgado/R6/USEPA/US]

We'll keep looking around for a perimeter layer.

Jeff
